PRODUCED IN ASSOCIATION WITH

EXERCISES FOR LOW BACK PAIN PHASE 2

Optimal strength in the core abdominal muscles is essential for a pain free back and good posture. Strength of the muscles supporting the lower back is also crucial in preventing and managing back pain. That is why so many exercises not only include the abdominals, but also the legs, glutes (buttocks) and hip muscles.

YOUR REHABILITATION PROGRAMME

BILATERAL STRAIGHT LEG RAISE

far as feels comfortable. Hold this position, and

relax. This exercise will stretch the hamstrings,

you cannot get your legs as high as shown.

Lie flat on your back with your arms by your

side, and with your knees bent. Squeeze

your buttock muscles and lift your back

upwards and straighten one leg. Make sure

lower back, gluteal and hamstring muscles.

REPS

Lie flat on your back, and lift both straight legs as

This exercise programme has specific exercises to strengthen muscles around your lower back and core. It is important to ensure the exercises are performed with good technique. Poor practice may place potential strain on your back. The following leaflet includes some exercises to help in your rehabilitation.

PROGRESSION SPEED

Your therapist will advise you on the speed you should progress. Progression is not just about being able to do the exercise but to do it correctly, with appropriate control. If at any time, you feel pain or discomfort stop the exercises and consult your therapist.

HIP ABDUCTION LYING

Lying on your side, flatten your lower back by gently tucking your stomach in. Lift your leg several inches in the air. You

can either hold this position, or return your leg down and then repeat the exercise. Ask your therapist which they would prefer you to do. This exercise strengthens the pelvic, gluteal, and lower back areas.

LUMBAR FLEXION WITH **ROTATION CONTROL**

Lie flat on your back, and contract your deep abdominal muscles by drawing your stomach inwards. Bend your hips to 90 degrees, keep your knees together, and rotate the spine. Do not go too far, just a few inches, and keep the movement controlled. This exercise works the lower abdominal muscles, and core control.

CLAM ADVANCED

Lie on your side, with both knees bent. Squeeze your deep abdominal muscles by drawing the belly button inwards.

Keeping your feet together, lift the feet 3-4 inches above the floor. Open your knees, like a clam, hold, and return to the start position. This is a good strengthening exercise for your gluteal (buttock) and outer thigh/ hip muscles. It also works the abdominal core muscles.

HORSE-STANCE HORIZONTAL

Draw your stomach inwards (towards the ceiling). Straighten your arm in front of you, and your opposite leg behind you. Repeat each side. This is a great core stability and core control exercise to work the deep abdominal muscles. The exercise will also strengthen the lumbar erector and gluteal muscles.
